Learning Journal - Days 2 & 3, November 29, 2017

Day 2

We learned about jQuery and forEach.

-jQuery is a library that makes working with JavaScript easier and faster. Use the jQuery cheatsheet!

-forEach is a shorter way to do a for loop.

Day 3

We learned about jQuery $.on() and 'data-'attributes.

-$.on() is the one event handler used in jQuery, usually with 'click' or 'change'.

-'data-' attributes can help with filtering (lost the thread here).

Also, discussed why to attach methods to prototype. Best understanding was that it allowed used of contextual this.

Also, talked about SPA - single page applications where pieces of a web page and hidden or shown depending on user input.

Also, during code review, learned that talking about code is difficult, especially not being comfortable with the technical language. Reading right to left was a helpful hint.
